rinicom
Secure communications

Leading provider of state-of-the-art secure communications and professional video surveillance solutions for defence, security and first-responder applications

BRITISH STEEL

Techniguard's Rapid deployment Towers were an integral part of the security Infrastructure during construction of the gas storage.

★★★★★

TSP ENGINEERING

A pleasure to work with these people, Their staff were very experienced in the Security industry and the service was top notch.

Couldn't recommend them enough!

★★★★★

AIRBUS AN EADS COMPANY

A We have used their equipment many times in both a maritime and land based scenarios. The service was always excellent and projects could not have been met without the equipment they supplied.

★★★★★

"To bring Defense technology to the Security market and become the leading provider of state-of-the–art *intelligent* wireless solutions for professional security applications, enabling our customers to rapidly and profitably deploy the best possible systems."

Techniguard in partnership with Rinicom

Supplying your Security needs.

Security & Communication where you need it most!

Rapid Deployment CCTV Technology

The Techniguard Rapid Deployment CCTV System is designed as a modular solution to deter and prevent theft in areas with zero infrastructure including zero availability of Power, Lighting or Internet connection.

- PTZ.
- Static Camera.
- Optional Fire Detection Cameras.
- Optional Thermal Cameras & Specialist Cameras.
- Covert Surveillance.

Features

- Zero Carbon Footprint
- 3g/4g Connectivity & Monitoring – This means:
    - No need for mains power,
    - No need for Internet,
    - No phone required.
- Deployed in as little as 15 minutes.
- Small Form Factor
- Industries only Military grade Deployable Mast.

HD RECORDING AT YOUR FINGERTIPS
Using at minimum 5Mpx resolution HD cameras you can expect evidential quality recordings.

ANALYZE
Our Video analytics are second to none, from left luggage alerts to facial tracking we can accommodate your needs

MONITORING
Inclusive with every hire our kit features monitoring by our award winning Cat 2 arc monitoring station included free.
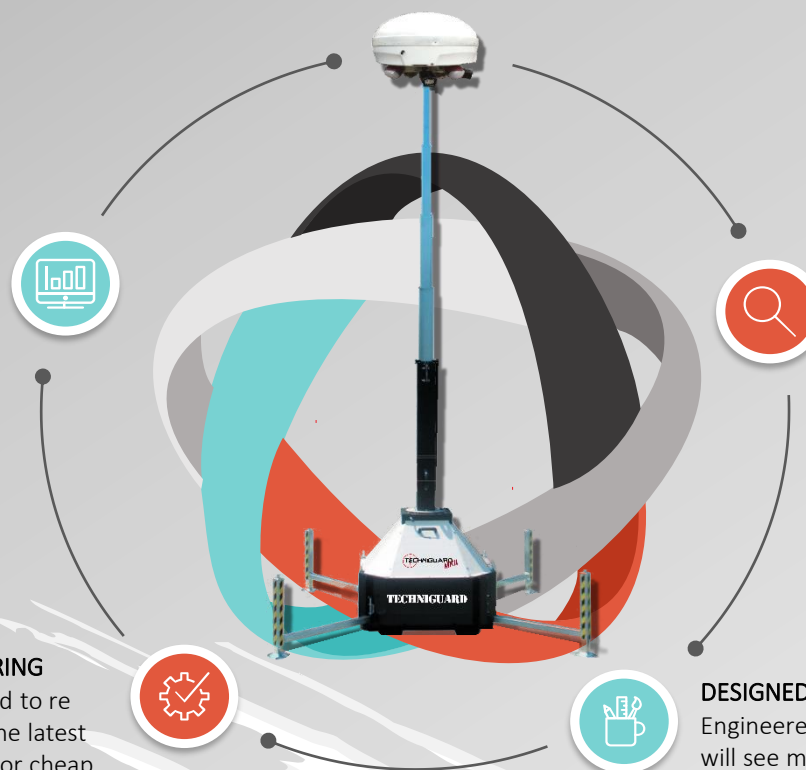

IMPLEMENT RE ENGINEERING
Techniguard have no need to re invent the wheel… with the latest tech on hand why settle for cheap copies and put your site at risk?

DESIGNED TO LAST
Engineered from military grade components you will see many copies of our equipment on the market but none that stand up to the rugged power of the Techniguard kit

Features and Benefits
Rapid Deployment CCTV Tower

- Proactive site protection and monitoring
- Up to 75% cheaper than manned-guarding
- Wireless detectors provide an invisible perimeter
- High Definition PTZ with directional IR
- Multiple powering options for optimum flexibility
- Battery back-up activated and alarm raised on power disconnection
- Audio functionality
- Low battery alerts
- GPS location information
- Shock, vibration and tilt alerts
- 4G, 3G, GPRS, Wi-Fi and IP connectivity
- Remote access to evidential recorded digital footage
- Ongoing health check, alert raised on camera failure, camera masking, hard drive failure or hard drive nearing capacity.

Benefits of Rapid Deployment CCTV Technology

Whether starting a new site with no electricity or setting up in the Yorkshire moors where there is zero infrastructure, the Rapid Deployment CCTV Tower(RDCT) has you covered.

Site Security
Techniguard constantly updates our kit with the latest and Next Generation technologies ensuring your site always has the best equipment available.

INVENTORY
Towers are stocked and ready for dispatch to your site in as little as 2 hours.

MANUFACTURER
Built to spec for your needs using specialist equipment from Fire Detection and Thermal Cameras to radar and Anti Drone Equipment.
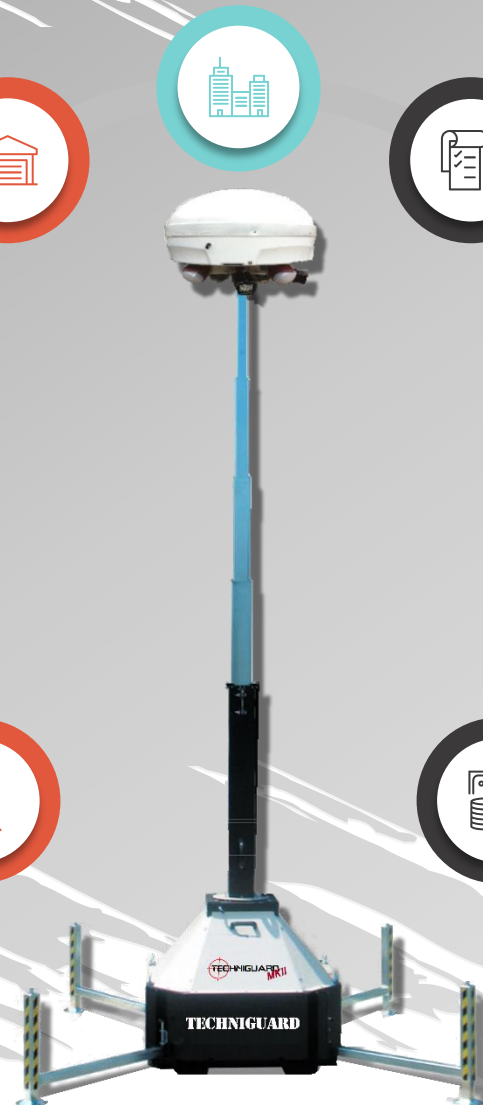

Crime Reduction
100% success rate! There has never been to date a successful theft from any site that the Techniguard Tower was deployed on.

Zero Carbon Footprint
using fuel cell technology the MKII produces no waste products.

TRANSPORTATION
Dispatched and deployed at a moments notice. 90% of the time same day delivery.

Deployment
setup takes less than an hour from unloading to recording and monitoring.

COST
Constantly updated with the latest technology whilst maintaining a maximum saving to clientele.

Body Camera Technology

The User

The PMRS Body Camera Is aimed at Police and Security Services world wide providing team wide protection .

The PMRS Body Cam

Utilising the latest in HD Footage and streaming technology the PMRS Body Camera will record events as they unfold in real time.

Wireless Communication

Not limited to wifi and local networks the PMRS utilizes the latest in secure M2M 3G /4G LTE Communication platforms.

Remote Upgrade

Technology is in constant flux but you can feel re assured that the PMRS Body Camera will Stay upto date with wireless firmware updates.

Remote Viewing

Supported by our award winning Category 2 ARC Monitoring station or viewed by the end user you can be sure you are always in control.

Network 3g/4g/LTE

71%

Of UK Police forces Use Body Camera Technology.

The PMRS Body Camera is a wearable recording and streaming media platform. It allows the user to record and stream full HD video, audio and location data over a cellular network.
The unit has an internal Full HD Camera and WIFI.

The PMRS Body Camera utilises the latest MRS Server System Architecture, Supporting the use of multiple units and viewers accessing the system at the same time.

The PMRS Body Camera

The PMRS serves as a tactical unit for Agencies that require **Mobile Multimedia Surveillance** solution, with **Location services** for Law enforcement, Public Transports, Safe Cities, HLS applications … and more

PodComm – Battlefield Skype

Providing secure and reliable communication environment for use in isolated networks without full infrastructure or server.
.

Secure Communications
Designed with the battlefield in mind the PodComm System does not require a 3rd party server making it a secure communication platform.
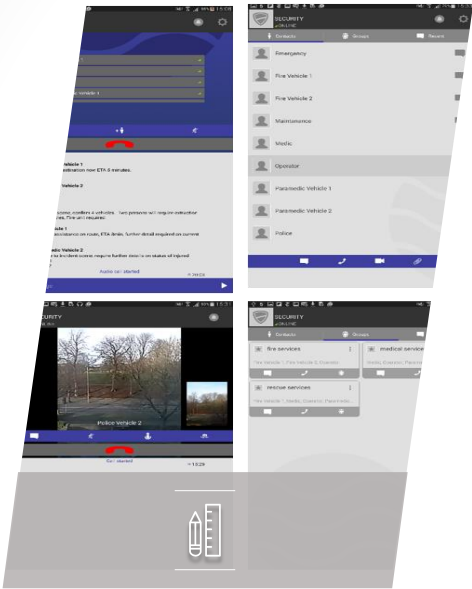

Auto Discovery
Other users on the network are automatically discovered meaning you can communicate securely in real time.

One System Multiple Options
Multi Communications Platform including: -
- full duplex video communication,
- conference audio,
- file transfer
- messaging

Secure Wifi Connectivity
Each PodComm client connects over WiFi or cable to a network switch. Clients are automatically discovered, and presented to the user as a list.

SKY PATRIOT

Drone Detection Technology.

REAL TIME LOCATION TRACKING

DETECTION FROM 800M

INBOUND DRONE

Sky Patriot

The Sky Patriot helps your organisation to detect, classify and track drones. Passive ultra high definition optic sensors constantly monitor pre-defined airspace whilst our powerful video analytics engine detects and classifies potential drone threats.

Commercial and Defence Applications

Sky Patriot is designed to alert users when a drone has entered into the target airspace. The system has many commercial and defence applications, for example: Prisons, Airports, and Places of Interest.
The system is scalable in that multiple entities of Sky Patriot can be deployed and integrated to deliver a detection system with specific areas of coverage.

Key Features

- Passive EO and PTZ drone detection system.
- Rinicom analytical software developed and optimised for drone detection.
- Typical detection range of 800m with a 30° FoV.
- Detection ranges can be varied by increasing or decreasing the FoV.
- PTZ camera for classification.
- Tripod or mast deployable.
- System is scalable and can be positioned to cover different areas of interest.

NETAMP WIRELESS CONNECTION
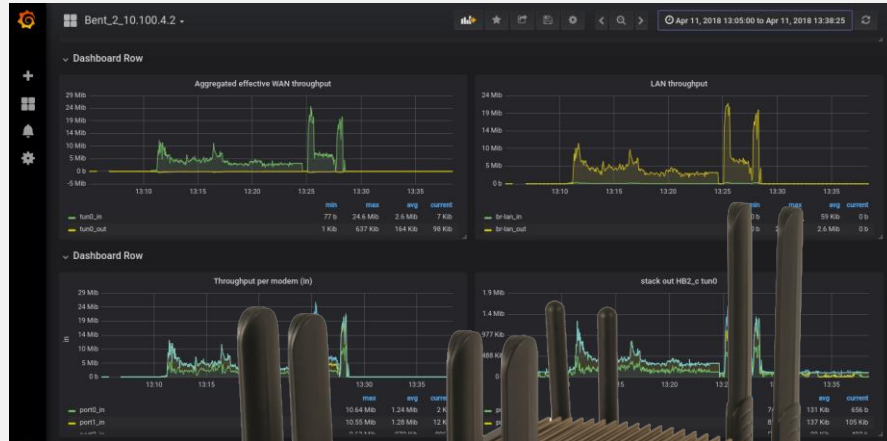

Wireless Connectivity

NetAmp is a client-server software designed to provide organisations with a single virtual network channel, at the packet level, but distributed over multiple network channels.

High Speed Data Transfer

It offers stable data transfer and Internet access anywhere, at the highest possible speed, making use of all it's available network channels.

Always Online

The NetAmp is always online, regardless of a single operator's network status, and ensures no operational difference, whether the user is mobile or stationary
